

Tract construction earnings are often unavailable or imprecise

Share of all returned census tracts in each borough; 2019–2023 ACS

Categories compare the 90% margin of error with the tract median. The 50% cutoff is descriptive, not a Census rule.

Bounded medians are reported only above/below a limit. Unavailable does not mean zero earnings.

The denominator includes tracts without an estimable construction-worker median. Source: Census ACS B24031 and B24041.
